News Release

SingTel launches islandwide MetroEthernet service

Cost effective solution for high speed, top quality local data connectivity

Singapore, 21 October 2003 -- Singapore Telecommunications Limited (SingTel) is the first to offer an islandwide MetroEthernet service that enables companies to enjoy high quality and fully protected data connection between different locations within Singapore.

This is the latest addition to a comprehensive range of domestic data services that SingTel currently provides, including Local Leased Circuit (DigiNet), ATM, Gigawave and Meg@POP.

Ethernet is one of the most popular, cost effective and widely used communications interface in today's enterprise networking environment. SingTel has been offering Ethernet-based services since 2000 as part of its Meg@POP IP VPN solution. SingTel Meg@POP EthernetLink service is one of the fastest growing IP VPN access options among customers today. By riding this generic interface, SingTel MetroEthernet provides a plug and play, simple, scalable and cost effective solution for data connection. While EthernetLink is an IP-based service where routing is outsourced to the service provider, SingTel MetroEthernet is a Layer 2 service which allows customers to retain full control of their IP layer while ensuring protocol transparency.

SingTel MetroEthernet service provides for point-to-point as well as point-to-multipoint connectivity at dedicated and granular speeds of up to 100 Mbps. Speed upgrades are available in incremental steps of 2 Mbps or 10 Mbps depending on the range. Such bandwidth granularity allows customers to subscribe what they need now and upgrade their bandwidth when their business needs change.

"MetroEthernet offers customers true bandwidth on demand – the ability to enlarge the pipe to fit their business requirements without the need to physically provide new circuits or install new equipment at their premises. Capital investment is kept to a minimum and our flat rate pricing makes this service a cost effective and compelling solution," said Ms Lian Bee Leng, SingTel's Vice President of Corporate Products.

"While packet data traffic has increased, there is also an increasing demand from users for flexible and low cost solutions for data delivery. Ethernet technology, known for its technical simplicity, robustness and cost-effectiveness, fills this need.

"We expect MetroEthernet services to take off very strongly in the near future," said Ms Lian. Analysts have forecasted that MetroEthernet subscribers in Asia Pacific will grow by 110 per cent annually to more than 9 million in 2006. In Singapore, demand for MetroEthernet services will be driven by the need to provide high speed corporate LAN/WAN connectivity, Internet, disaster recovery and content services.

"By taking a proactive approach to this new technology, we will ensure that SingTel will have the solutions ready to meet our customers' needs," said Ms Lian.

About SingTel

SingTel is Asia's leading communications company with operations and investments in more than 20 countries and territories around the world. Serving both the corporate and consumer markets, it is committed to bringing the best of global communications to customers in the Asia Pacific and beyond.

Operating out of two major centres, Singapore and Australia (through wholly-owned subsidiary SingTel Optus), the SingTel Group provides a comprehensive portfolio of services that include voice and data services over fixed, wireless and Internet platforms.

In Singapore, SingTel has had more than 120 years of operating experience and has played an integral part in the development of the city as a major communications hub in the region. In Australia, Optus serves more than six million customers. It has driven the competition as the challenger brand and led the way in technological innovations and breakthroughs.

The Group's other major investments in the region include Advanced Info Service of Thailand, the Bharti Telecom Group of India, Globe Telecom of the Philippines and Telkomsel of Indonesia. Together with its regional partners, SingTel is Asia's largest multi-market mobile operator, serving more than 37 million customers in six markets.

SingTel has been recognised Best Asian Telecom Carrier by industry publication, *TelecomAsia*, for six consecutive years since 1998. The Group employs more than 19,000 people around the world and had a turnover of S\$10.26 billion (US\$5.80 billion) for the year ended 31 March 2003.
